Nasal irrigation works!

Read carefully for a great first experience.

The world's only nasal irrigator with gentle powered suction!

Owner's Manual

Nasal hygiene will be to the 21st century what oral hygiene was to the 20th!
Use Naväge twice a day for two weeks and experience how clear nose-breathing and improved nasal hygiene can change your life!

Thank you for purchasing the Naväge® Nasal Hygiene System, the world's only nasal irrigator with gentle powered suction. Naväge provides fast relief from sinus congestion without drugs, and a cleaner nose than ever before. To get the most out of Naväge, read the Owner’s Manual carefully and watch the videos at navage.com. For further assistance call Customer Support at (800) 248-7550. We’re here to help!

For personal help, call (800) 248-7550 or email support@navage.com.
ASSEMBLY

1. Twist off the upper and lower tanks (Fig. A). Hand wash the tanks and nose pillows prior to first use.
2. Lift the Drain Pull (Fig. B) and remove the red pull tab.
3. Insert the included AA batteries and screw the battery door on tightly. Reattach the tanks.
4. Press the Standard, light-blue nose pillows snugly over nasal-dock posts (Fig. C). Try all three sizes to determine the best pillow for you. Note arrows indicating the direction of flow.
5. Attach nasal-dock to mechanical module, and take care that O-Rings remain snug in their channels (Fig. D). The nasal-dock rotates 360° allowing rinse to flow in either direction.

STEP BY STEP INSTRUCTIONS

1. Fill the Upper Tank to the Fill Line (Fig. 1) with warm water. See page 6 for important water information.
2. Place a new, unused SaltPod capsule in the crushing chamber, foil-side down (Fig. 2).
3. Close the lid firmly until you hear it click shut and do not reopen it (Fig. 3).

Continued on next page.

The power button only operates with a new SaltPod in the crushing chamber and the lid clicked shut.

If you reopen the lid after loading a SaltPod, the device will not work.

No Peeking!
4. Gently shake the device for a couple of seconds to mix SaltPod contents with water in the upper tank.

5. Locate the power button. It has two stages, similar to a camera button that first focuses and then snaps a picture. Push the button in half-way and the suction pump starts. Push it in all the way and the drain valve opens and saline flows out of one of the nose pillows.

   *Feel the suction with your fingertip. Cover the nose pillows with your finger tips and press the power button in half-way. You will feel a light suction from only one of the two nose pillows.*

6. Run a little water over the nose pillows to make them easier to slip into your nostrils.

7. Insert and center the nose pillows in your nostrils so that the **tips are not blocked**. They should be snug, but not too snug. Bend the flexible stems to obtain a centered, comfortable fit (Fig. 4).

   *For the best first experience, take care to adjust the nose pillows correctly. First, press the pillows in firmly to create the seal. Then, once the cycle is initiated, back off a little to increase flow. With the nose pillows, it’s all about positioning (keeping the tips centered and unblocked) and pressure (just enough to make a seal). If one or both pillow tips are blocked, suction will decrease or stop and you may get water down your throat, slow flow, or no flow at all.*

8. Relax… Stand up straight and keep your head erect (Fig. 5). **Smile** and breathe normally through your mouth. Now push the power button in half-way **for just a moment** and feel the suction, or you can push it all the way right from the start. Experiment and you’ll find what works best for you.

   *Naväge uses gentle powered suction. **Do not hold the power button in the suction-only mode (pressed in half-way) for more than a few seconds,** as this can cause minor ear discomfort in some users. In general this condition clears up quickly on its own, as after riding in an elevator or airplane, and it is harmless. To avoid this, press the power button in all the way. This will release any suction buildup and allow the saline to flow into your nose.*

Nasal irrigation is safe and effective, and doctors advise that it can be practiced as often as you wish. Once you get the hang of it, we recommend using your Naväge several times in a row to help quickly master the art of nasal cleansing. If you need assistance, please call Customer Service at 800 248-7550. Our reps are daily Naväge users themselves, and they are eager to help!

9. A Naväge cycle can last from about 10 seconds to a minute, depending on personal anatomy and congestion. Most cycles last from 20 to 30 seconds. The cycle is complete when the upper tank is empty.

10. Release the power button and remove the pillows from your nostrils. Most users will have a little saline remaining. Gently blow your nose.

11. Twist off the bottom tank and empty it. Clean your device following the instructions on page 6.

---

**For personal help, call (800) 248-7550 or email support@navage.com.**
1. **Problem: I’m getting water down my throat!**
   The key to successful nasal irrigation is making your nasal cavity into a **closed** system, separated from your oral cavity. That’s why the rinse can go in one nostril and out the other — and **not** down your throat.
   - **Relax… and smile.** It’s really important. The more relaxed you are, the easier it is! Nasal lavage is safe and effective, but for some new users there’s a learning curve. It may take 3 or 4 or 5 tries, but be assured that just like millions of daily users, you’ll master it, too!
   - The nose pillows should be in snug, but not too snug. Press the pillows in firmly to create a seal. Once the cycle is initiated, back off a little to increase the flow. Don’t block the tips against the inside walls of your nose. **Less** pressure equals **more** flow.
   - Try each of the three pairs of nose pillows to find out which work best for you.
   - Breathe normally through your mouth.
   - While irrigating, say **Ähh…** Seriously. Take a deep breath and say or sing “aah” just like you would for a doctor examining your throat. Then take another breath and sing it again!
   - Reverse the direction of flow. Rotate the nasal dock 180 degrees, and the saline will then flow in the opposite direction. This can make a big difference depending on your unique anatomy (Fig 6).
   - Try placing your tongue against the roof of your mouth.
   - Again, if you’re in that small group for whom there is a learning curve, please persevere. There are countless Amazon reviews like this one: “Absolutely love this. Once you get the hang of it, it works better than anything I have ever bought! So hang in there, it’s worth it!”

2. **Problem: Power button won’t push in, Part 1.**
   For the power button to operate, a new Naväge SaltPod must be placed in the crushing chamber **foil side down** and the lid clicked shut. **The device is designed to work only when loaded with a new, unused SaltPod.** This is an important safety feature to avoid the painful stinging and burning that is caused by running plain, unsalted water through your nose. It is also a super convenience that eliminates the uncertainty and mess of measuring and mixing! **This is critical:** if you reopen the lid, the power button will no longer work with that particular SaltPod—even if you re-close the lid. The button will be locked out, and impossible to push in. That’s why there’s **no peeking!**

3. **Problem: Power button won’t push in, Part 2.**
   Rinse the device with hot water for at least 30 seconds in each of the three places marked A, B, and C (Fig. 7). This will eliminate salt crystal buildup that can interfere with device operation. Make sure you time it; 30 seconds is the magic number! After rinsing, lift the Drain Pull (C) to verify that it is not stuck.

4. **Problem: The button pushes in, but the pump doesn’t start.**
   a. Rinse the device as described in #3.
   b. Visually reconfirm that the batteries are installed in the correct direction inside the battery compartment. Fresh AA batteries should last at least 3 months if you use the device daily.

5. More help, instructional videos, and additional tips are available at navage.com. You can also email support@navage.com or call us at (800) 248-7550 during normal business hours. We’re here to help!
CAUTIONS

• If you experience pain during use, stop immediately. If the pain continues, consult a health care professional.

• ABOUT WATER. The University of Wisconsin Department of Family Medicine advises that in North America, lukewarm tap water from municipal water systems or intact wells deeper than 40 feet is safe for saline solution preparation. If these criteria are not met or if water safety is in doubt, distilled water or tap water boiled and then cooled to room temperature is recommended. The US FDA advises using filtered, distilled, or previously boiled water for nasal irrigation, and that water “passed through a filter with an absolute pore size of 1 micron or smaller” is safe for nasal irrigation.

• Most users prefer to warm their water prior to use. Do not overheat the water. It should be lukewarm to the touch and not hotter than about 85° – 90°F (29° – 32°C).

• Rinsing your nasal passages with plain, unsalted water will cause a painful burning sensation.

• Consult your doctor before use if you have had ear or nose surgery in the past 6 months.

• Nose bleeds are a rare but known side effect of saline nasal irrigation. Consult your physician if you experience a nose bleed after use.

• Do not use if your nasal passages are completely blocked and it is impossible to breathe through your nose.

• Do not use if you have an ear infection or if your ears are blocked.

• Ear popping and ear fullness are rare but known side effects of nasal irrigation that typically resolve on their own in a short time. Discontinue use and consult your physician if the condition persists.

• Naväge uses gentle powered suction. Do not hold the power button in the suction-only mode (pressed in half-way) for more than a few seconds, as this can cause minor ear discomfort in some users. In general this condition clears up quickly on its own, as after riding in an elevator or airplane, and it is harmless. To avoid this, press the power button in all the way. This will release any suction buildup and allow the saline to flow into your nose.

• Consult a health care practitioner if you are using the Naväge Nose Cleaner to relieve congestion due to a nasal illness and there is no improvement after use; or if your symptoms persist or worsen; or if you have a persistently thick and yellow or green discharge; or if skin at the base of the nostrils becomes raw or crusted.

• Terminate use if no saline appears in the lower tank after 60 seconds.

• Do not use continuously for longer than five minutes.

• To prevent cross infection between users, the Naväge Nose Cleaner should not be shared.

• Not for use by children under the age of twelve.

• Clean the nose pillows and device after each use according to the cleaning instructions.

• Using the product with illegal drugs, alcohol, or prescription drugs except when prescribed by a physician is prohibited, may damage the device, voids the warranty, and may cause serious injury.

• Use only as indicated in these instructions or as directed by a health care practitioner.

CLEANING INSTRUCTIONS

• Underside of the white mechanical module: Wipe with a damp cloth. Do not rinse the underside with running water, as this may damage the pump and force water into the battery compartment. Do not immerse the mechanical module; it is not water proof.

• Crushing chamber lid: Rinse areas A and B with hot water for 30 seconds to melt any dried salt crystals (see Fig. 7, page 5).

• Upper and lower tanks, nose pillows, and nasal dock: Detach and wash after use with anti-bacterial dishwashing soap or diluted white vinegar (half-water, half-vinegar).

• Drain pipe: Place a drop of antibacterial dishsoap on the included cleaning swab, and insert as show in Fig. 8 and Fig. 9. To rinse, lift the Drain Pull (C) and run hot water through the drain pipe (see Fig. 7, page 5).

• The Naväge Nose Cleaner is not dishwasher safe. Exposing the tanks to dishwasher heat will warp them and prevent them from sealing to the center module. Cleaning the Nose Cleaner in a dishwasher voids the warranty.
What actually happens during a nasal lavage cycle?
Saline enters one nostril and flows to the back of the nose where there is a gap between the back edge of the nasal septum and the rear wall of the nasal cavity. The rinse flows through the gap and returns to the front of the nose where it exits through the other nostril, flushing out micro-organisms, allergens, and encrusted mucous. **In short, in one nostril, around the back of the nasal cavity, and out the other nostril.**

How is the Naväge system different from other nasal irrigators?
Naväge® is the only nasal irrigation system — in the world — that uses gentle powered suction. It pulls the nasal rinse through the nose while other devices like the neti pot and nasal squeeze bottle push. It’s like the difference between a broom and a vacuum cleaner. As a result, Naväge is exceptionally neat and convenient, and it can be used standing up, fully clothed, without making a mess.

What is in a Naväge SaltPod®?
Naväge SaltPods have two ingredients: sea salt and water. The salt is a super-purified pharmaceutical grade that contains over 99.99% sodium chloride. With zero additives and no fillers, this is the purest sea salt available. The water goes through a sophisticated purification process that consists of carbon filtration, double deionization, UV sterilization, and a sub-micron finishing filter. **The result: seriously clean water.**

How often should I irrigate?
As often as you wish because Naväge and saline nasal irrigation are completely drug-free! We suggest you use Naväge twice a day, morning and evening, but it’s safe to use more often. Find out what’s best for you by using it regularly for a couple of weeks, and judging the results for yourself!

I leak saline — sometimes hours after I irrigate! What’s happening?
During an irrigation cycle, saline flows past tiny channels that connect the sinuses to the nasal cavity. Sometimes, a small amount of saline can flow into a sinus cavity, stay there, and flow out later. This can be annoying and even embarrassing, but it is completely harmless. To avoid it, try this: After completing a cycle, bend over at the waist and bring your chin to your chest. Keeping your chin on your chest, turn your head to the left as if looking over your shoulder. Now turn your head to the right and look up over your right shoulder. If there’s any residual saline, this usually lets it flow out. Gently blow your nose.

How long will the batteries last?
The batteries will provide sufficient power for several months of twice daily use. If you notice the motor is running at a lower pitch or if there is less suction than you’re used to, it’s time to change the batteries.

Naväge Nose Cleaner Limited Warranty
The Naväge Nose Cleaner is covered by a limited, one-year parts and labor warranty. We will repair or replace any product that malfunctions due to a manufacturing defect within a year of purchase. For service, contact us at support@navage.com, or call (800) 248-7550. Please note that the Naväge Nose Cleaner is not water-proof. **The limited warranty does not cover damage caused by:**

- Placing the Nose Cleaner in a dishwasher;
- Using the Nose Cleaner without a new, unused, genuine Naväge SaltPod capsule;
- Improper use of additives such as tea tree oil that can cause irreparable damage to plastic;
- Submerging the Nose Cleaner in water; not fully tightening the screws on the battery door;
- Dropping and other accidents.

Disposal and Recycling
Please recycle. Naväge SaltPods are made from HDPE, recycling code #2. The SaltPod packaging tray is made from RPET (recycled PET), recycling code #1. **The Naväge system is completely BPA-free.**
Naväge SaltPods are made in the USA
Naväge SaltPods are manufactured in our Brooklyn Heights, Ohio facility which is certified to comply with ISO 13485:2003, the internationally recognized quality standard for medical device manufacturing. Naväge SaltPods are licensed by Health Canada’s Natural Health Product Directorate, Natural Product License Number 80035721.

RhinoSystems, Inc. is the Manufacturer of the Naväge Nose Cleaner and SaltPod® Capsules
The Naväge Nose Cleaner is designed in the USA and made in China. SaltPods are made in the USA. RhinoSystems is committed to continually improving our products through ongoing research and development. RhinoSystems is ISO 13485:2003 certified, certificate number SCC-0219a. We strive to maintain the highest quality in everything we do.

Electromagnetic Compatibility
The Naväge Nose Cleaner has been built and tested to comply with the applicable electromagnetic compatibility requirements (EMC) according to IEC60601-1-2 for residential, commercial and light industry environments. For further details, see “Guidance and Manufacturer’s Declaration – Electromagnetic Emissions and Immunity” as follows.

Guidance and Manufacturer’s Declaration – Electromagnetic Emissions and Immunity
The Naväge Nose Cleaner is intended for use in the electromagnetic environment specified below. It is the responsibility of the customer or user to ensure that it is used only in such an environment.

Cautions: Medical devices need special precautions with respect to EMC, and the Naväge Nose Cleaner should be installed and put into service according to the EMC information provided herein. The device can be affected by portable and mobile RF communications equipment. It should not be used adjacent to or stacked with other equipment, and if adjacent or stacked use is necessary, it should be observed to verify normal operation in the configuration in which it will be used. The product has been found to have no Essential Performance and does not require immunity testing.
